Description

A screw-in, cartridge-style, fixed orifice, pressure compensated, hydraulic flow regulating valve (restrictive type) .

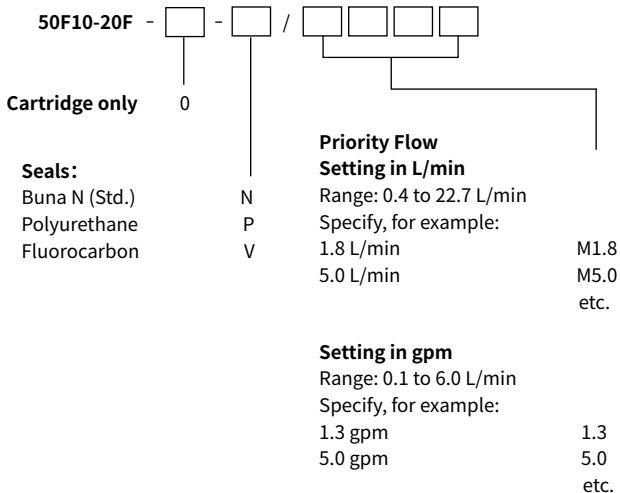

Operation

The valve maintains a constant flow rate out of ② regardless of load pressure changes in the circuit downstream of ② .

The fixed control orifice is factory preset to customer flow specification. The valve begins to respond to load changes when the flow through the valve creates a pressure differential across the control orifice greater than 5.5 bar, with accurate flow maintenance from 7.6 to 345 bar. Reverse flow (② to ①) returns through the control orifice and is non-compensated.
